iPong Upgrades

In case you haven't noticed, our iPong line has undergone a complete makeover! The original iPong models have been improved substantially and we've even added a new model!

We now offer three versions - iPong Topspin, iPong Original, and iPong Pro. Features vary with each model to cater to different playing levels. The base model, iPong Topspin, shoots out adjustable topspin balls for beginners who are just starting out, the Original model adds customizable backspin to the mix, and the Pro offers a combination of variable spin and oscillation.

Across the board, every model has been subjected to material and technological upgrades. Read about them below:

- Motor - A top-of-the-line gearbox that can match your intensity during practice!
- Projection Wheels - Instead of the foam wheels that began to deteriorate after about 50,000 revolutions, the new models use long-lasting rubber wheels that are consistent in shape and size.
- Plastic - In addition to being thicker, the new plastic material features a matted surface that resists unwanted fingerprints and dust. Furthermore, the material upgrades and improved design make the parts easy to put together.
- Logo Plate - We are introducing a stylish logo plate with a designated spot on the front of each robot. The result is a clean and modern new look!
- Colors - To help our customers differentiate between the models, we have introduced two new colors to the mix. The iPong Topspin comes in a bright and energetic green, the iPong Pro comes in a deep red, while the Original model remains the classic black.
- Oscilliation Plate - This plate has been reinforced so that it can transition smoothly and better accommodate the weight of the balls.
- Remote - The size of the remote has been reduced so that it is now thinner and lighter.
- Warranty - Every iPong comes with a one year manufacturer's warranty.
- Packaging - The boxes have all been redesigned to reflect the exciting new changes of

the product. In addition, we are joining in efforts to protect the environment - styrofoam packaging material is no longer being used.
